Graffito works exactly like carbon paper. The Graffito sheets are embedded with a ceramic underglaze that will transfer to bisqueware when drawn upon using a stylus, ballpoint pen or pencil. This means that any image or photograph can be transferred to your ceramic piece. However, unlike carbon paper, Graffito colours remain after firing.

Graffito is designed to be put only on bisqueware. The pressure of the pencil/pen may indent the clay if it is used on greenware or leather hard clay. The medium is ideally suited for flat items like tiles, plates and trivets.

All colours except Pink (cone 06 to 4) can be fired from cone 06 to cone 8. Each sheet is a 23cm square.

**Available in 12 colours**

**\$8.50/ sheet**

Black   Blue   Brown   Green   Pink   Teal   Orange  
Red   Violet   Turquoise   White   Yellow

**Plain carbon tracing paper sheets also available \$1.50 / sheet**

Use to draw patterns onto clay that wont repel colours and will burn away after firing.

Great for 'paint by numbers' style decorating on bisqueware.

Works on all stages of clay! (soft, medium, leather hard, bone dry and bisque)

Temperature Range: Cone 06-10. Zinc-free Clear Glaze Recommended.

## RAKU

Mayco Raku glazes are designed to develop beautiful metallic lusters and crackle patterns when fired according to raku firing processes.

**MRAKU \$39.60 each**

COPPER PENNY

PEACOCK MATTE

OIL SLICK

Do not glaze inside or bottom of ware. Thinner coats tend to produce greater metallic effects. Fire to cone 06 (1010°C) and hold for 5 minutes. Remove ware from kiln with tongs. Place ware into metal lidded container with combustible materials. Place lid on immediately to reduce oxygen. The combustible materials will produce flames and smoke. Leave in container until cool, approximately 20 minutes and remove. After ware has completely cooled use water and a scouring pad to clean; cleaning will improve the lustre and colours in the fired finish. Actual fired results will vary according to choice of clay.

## The Three Cone System

While a single cone may be used on a shelf to “witness” the firing, it is recommended to use three different cones.

The group consists of a Firing Cone - the desired cone for the ware being produced; the Guide Cone - one cone number cooler; and the Guard Cone - one cone number hotter than the Firing Cone.

These cones need to be set deep in the kiln, yet should be visible through the bung hole.

When the Guide Cone starts to bend, the ware is approaching maturity.

The bending of the Firing Cone indicates that the firing is at its correct stage. If the Guard Cone has bent, the firing has passed its best time-temperature window.
