## CESCO UNDERGLAZES 1000 - 1280°C

- Cesco colours are intermixable
- Suitable for most earthenware bodies
- Best results obtained by firing to 1100°C under Cesco Clear Earthenware Gloss Glaze
- Most underglazes will fire to stoneware temperatures with some loss of colour intensity
- May be fired on greenware or bisque either under or over glaze

## GRAFFITO UNDERGLAZE

TPO1 Geisha

Graffito works exactly like carbon paper. The Graffito sheets are embedded with a ceramic underglaze that will transfer to bisqueware when drawn upon using a stylus, ballpoint pen or pencil. This means that any image or photograph can be transferred to your ceramic piece. However, unlike carbon paper, Graffito colours remain after firing.

Graffito is designed to be put only on bisqueware. The pressure of the pencil/pen may indent the clay if it is used on greenware or leather hard clay. The medium is ideally suited for flat items like tiles, plates and trivets.

All colours except Pink (cone 06 to 4) can be fired from cone 06 to cone 8. Each sheet is a 23cm square.

**Plain carbon tracing paper sheets also available \$1.50 / sheet**

Use to draw patterns onto clay that wont repel colours and will burn away after firing.

Great for 'paint by numbers' style decorating on bisqueware.

**Available in 12 colours**

**\$8.50/ sheet**

## TRANSFER PAPERS (IMPORTED)

Works on all stages of clay! (soft, medium, leather hard, bone dry and bisque)

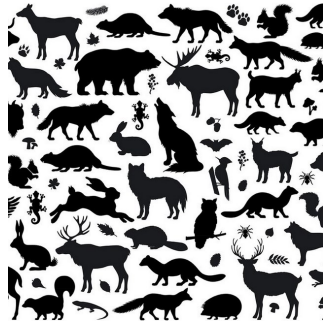

Temperature Range: Cone 06-10. Zinc-free Clear Glaze Recommended.

## Duncan Pure Brilliance® Brush-On Clear Glaze

## How to Use

1. Mix clear glaze with palette knife.
2. *Sponge Application:* Dab a clean sponge into glaze and dab one coat over colours on surface of bisque to cover. After the sponged coat has dried thoroughly, load glaze brush with glaze and brush on two coats. Allow to dry between coats.
3. *Brush Application:* Load a glaze brush with glaze and apply two flowing coats. Let dry between coats.
4. Let ware dry thoroughly. Set ware securely on clean,

## BME110 Speckled Medium

Want to enhance your piece? Add a teaspoon of speckle to ANY glaze to instantly give you that wow factor!

You control the process – add 5 to 10ml to 500mls of Glaze to achieve your desired results.

Fired results will vary according to Fired Temperature.

Fire glaze to recommended temperature – 1080°C – 1280°C.

## DID YOU KNOW?

BMG190 Special Effects is not a stand alone glaze. It is applied under another glaze to give a microcrystalline appearance.

*Not suitable for use with Cadmium based stains.*

## (SH) Shino

Influenced by the humble earthiness of tea ceremony bowls, our Shino glazes give a traditional high-iron look to any high fire clay body. Beautiful on textured or smooth clay bodies, blendable to get the right degree of matte or glossy surface.

Shino glazes can also be layered with our PC line of glazes for different effects.

- Heavy Iron reduction look in oxidation
- Suitable for Red or White Clay
- Blendable to get gloss or matte variations
- Food safe
- Cone 5

## (C) Celadon

Like the beautiful ancient glazes they are modeled after, the AMACO Celadon glazes are glossy, transparent, and pool beautifully to add vivid accents to textured and carved surfaces. These playful celadons come in many colors and are 100% mixable- great for finding that perfect color!

- Translucent for textured surfaces
- Mixable colors for custom palette
- Food-safe
- Shown on White Clay
- Cone 5 - 6
- Look great under Potter's Choice Glazes (3 coat/ 3 coat)
- Pictured results were fired in Oxidation

## (PCF) Potter's Choice Flux

Introducing the Potters Choice Flux glazes! All the things you love about PC-17 Honey Flux – its soft flowing look, how it interacts with other glazes, and how it accentuates texture on light and dark clays – now in six more colors. Food safe, lovely, fluid, and can be used alone or in conjunction with other Amaco glazes for endless creative options. Each Potters Choice Flux glaze has it's own character and beauty.

For best results the lustre should be applied evenly to clean glazed surfaces with a flat camel hair or sable brush.

A much thinner application should be used if firing on glass. Too heavy a coat will blister or flake. Uneven coats may cause variations.

Thin, even applications of lustres are a must. If a deeper colour is desired, then reapply the material being used and refire. Never pat a spot, but go over the entire area and refire. Lustres can be applied over one another as long as you fire in between.

Work in a dust and draft free area. Dust and moisture are the two most detrimental elements in working with lustres. Clean the surface of the glaze with a cleaner to remove any dust, finger-paints, or grease-like coatings sometimes found on the ware after glaze firing.

Lustres vary in viscosity and workability. Those that appear thick and tacky can be conditioned by adding a few drops of Lustre Thinner. Lustres may be also thinned further and applied by spraying.

**Not all colours or quantities are kept in stock. Please call ahead to confirm or special order.**

## MENDERS & ENHANCERS

### AC306 Mayco Clay Mender (59ml)

\$9.60

Clay Mender is an "enhanced slip" that is intended to be used to repair and/or add attachments to greenware or bisque. Simply moisten pieces with water-no extra adhesive required!

1. Scoring the location where an attachment will be placed will strengthen the bond.
2. Apply a generous coat of Clay Mender and immediately and firmly press the pieces together, holding them in place for 10-20 seconds
3. Let the area dry.
4. After drying, the areas can then be sanded and smoothed to prepare for decoration.
5. A top dressing of an underglaze may be needed.
6. Clay Mender sometimes will show a slightly different colour than the clay being used.
7. There are times when the glaze will not readily adhere to the mended area and the top dressing of an underglaze will overcome this problem.
8. Fire to cone 04.

### APTII Ceramic Enhancer (59ml)

~~\$33.30~~

APT II Ceramic Enhancer is an acrylic emulsion additive that is food safe and non-toxic. It cleans up with water and has an indefinite shelf life. APT II Ceramic Enhancer will thicken all brands of slip and clay bodies, which enables attaching, mending and creating surface decorations on greenware, bisque or finished glazed pieces.

### APTII Porcelain and Stoneware Enhancer (59ml)

~~\$31.30~~

Mends and attaches bisque, glazed & greenware pieces. Provides smoother application of glazes & colours.

### AC-310 Mayco Silkscreen Medium (118ml)

\$11.20

Mayco Silkscreen Medium is a thickening agent that, when added to Underglazes, creates a "ceramic paste" that is suitable to be used with Silkscreen Stencils.

SSC	Self Supporting Cone	2.60	41.90
SCS	Standard Cone Stand 3 Hole	4.90	-

### The Three Cone System

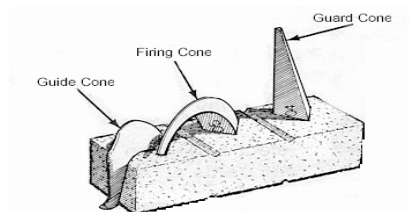

While a single cone may be used on a shelf to “witness” the firing, it is recommended to use three different cones.

The group consists of a Firing Cone - the desired cone for the ware being produced; the Guide Cone - one cone number cooler; and the Guard Cone - one cone number hotter than the Firing Cone.

These cones need to be set deep in the kiln, yet should be visible through the bung hole.

When the Guide Cone starts to bend, the ware is approaching maturity.

The bending of the Firing Cone indicates that the firing is at its correct stage. If the Guard Cone has bent, the firing has passed its best time-temperature window.
